The "SetFast" Advantage

The true innovation behind this extraordinary fastener is in how it works! At first, the "Hex Nut" threads freely onto the "bolt stud". After a number of turns the "Hex Nut" engages the "Threadlocker" creating interference.

Now when the "Hex Nut" turns so does the "Bolt Stud". With each turn the "Bolt Stud" becomes shorter as it threads down into the "Anchor Nut".

It's simple, just tighten and let the "Self Adjusting" design do the rest, no pre-adjustment needed.

For added versatility the "Threadlocker" will break-away if forced. This allows the "Hex Nut" to tighten down even if the "Bolt Stud" or its threads become obstructed. The bolt then operates in a conventional manner and can be cut if needed.
